

/ THE FUTURE IS BUILT ON MINERALS /

We

I am the future

I ask the really important questions: How do we want to live together in the future? How do we create liveable spaces? And how can we create sustainable cycles? Miralis mineral insulating foam reduces the CO₂-footprint by up to 64%, provides a natural indoor climate and enables long-term solutions for a better tomorrow.

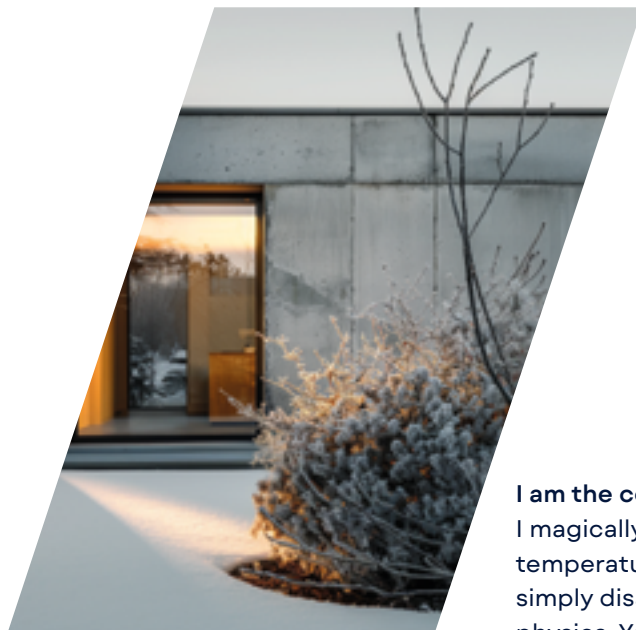

I am the sound

I'm travelling through traffic at 1235 km/h. Your speed limits? Do not apply to me. For me, only physics counts. Which brings us to the insulating material from Miralis. This fine, freely mouldable mineral foam has a sound-absorbent effect. The other properties, such as the high thermal insulation performance, full recyclability and the low CO₂ equivalence, sound just as good.

Properties:

- / 100% mineral
- / Recyclable
- / Durable & sustainable
- / Easy to fill
- / Industrially applicable
- / Breathable
- / Resource-saving
- / Efficiency-enhancing
- / Global

I am the cold

I magically attract warmth. I let cosy room temperatures pass through walls in winter and simply disappear outside. It is not a trick, it is physics. You don't see it and only notice it when the heating bill arrives. My tip to make sure you don't get caught cold in winter: Mineral insulating foam from Miralis. This marvellous and flexible material with great thermal insulation characteristics ensures that heat stays where it belongs: inside the house. Pretty cool, isn't it?

shape

I am the heat

I break my own records all the time. In general, I have been in top form in recent years, with the hottest temperatures on record. Speaking of top form: The mineral insulating foam from Miralis acts as a kind of bodyguard against high outside temperatures and, thanks to its breathable structure, ensures a natural feel-good climate inside – and it's also non-combustible.

Everyone has their own idea of the future. But how the world will look, feel and sound one day depends crucially on how we shape it. Not sometime, but today. How will we deal with the climate? With heat and cold? How will we live and work? And where do we find our inner peace when life around us is getting louder and louder? Many questions waiting for answers. We at Miralis do not approach this philosophically, but purely physically: With mineral insulation solutions that are designed for the future – not only for today and tomorrow, but also for the day after tomorrow.
